

How to Specify Locker Style

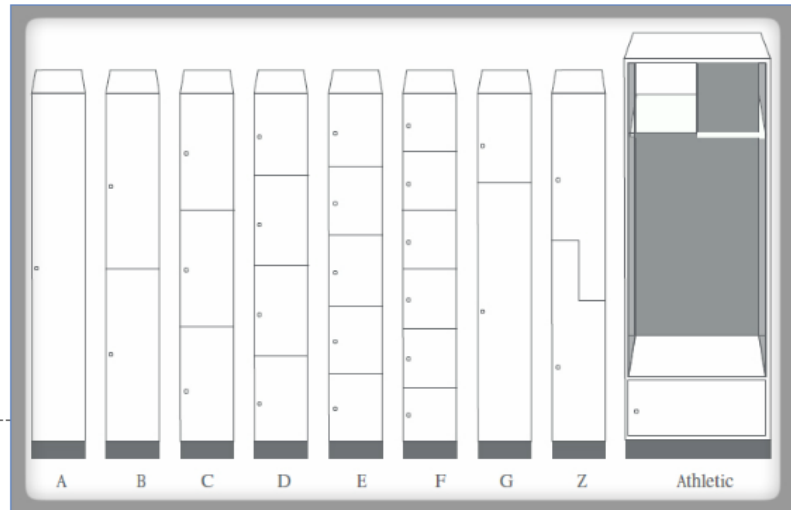

Classic Woodworking builds every locker to order – meaning that we can customize just about anything to meet your needs. We also have the experience of producing lockers for facilities all over the world, so let us know any guidance you might need to make your project a success. Please refer to the diagrams below to let us know what your design specifications and ideas are.

Standard Outside Dimensions

Locker Widths: 12", 15", 18"
Locker Depths: 12", 15", 18", 20"
Locker Heights: 60", 72", 84"

Locker Construction

Standard locker frame consists of 5/8" stain resistant, high impact, high density double sided almond melamine sides and shelves with a 2mm PVC edgeband on the leading edges of the locker to closely match the locker doors. All of our locker parts are precision machined and dry-fit prior to assembly using a dowel and glue process at our manufacturing facility ensuring square; rigid lockers without warp. Our lockers are shipped fabricated as individual units in a wide variety of configurations.

Available Interior Melamine Colors

The classic choice is almond, though gray, black, and white are frequently selected as well.
Note: Almond is the standard option. Other colors are premium options.
